Randy,

I wanted to make you aware that recent course changes in CFAES have resulted in an increase of one credit hour in the Ph.D. program in the Department of Plant Pathology. Specifically, the content of Plant Pathology 7003 (cross-listed with Horticulture and Crop Science 7003) – Agricultural Genomics: Principles and Applications (3 cr.) was divided into two courses – PLNTPTH 7003.01 – Agricultural Genomics: Principles and Applications (2 cr.) and HCS 7003.02 - Agricultural Genomics: Principles and Applications (2 cr.). Consequently, the required coursework in the Ph.D. program increased by 1 credit hour from 43-47 credits to 44-48 credits.

This programmatic change was approved by the College of Food, Agricultural, and Environmental Sciences Academic Affairs Committee. Please let me know if any additional information is needed regarding this matter.

Steve
